AFTER SALES SERVICE

FOR OPTIMAL SUPPORT
AFTER COMMISSIONING

AFTER SALES SERVICE

The handover of a turbine to the customer represents not only the successful completion of a project, but also the beginning of a long-term customer relationship. If desired, we support our customers over the entire service life of their turbine.

OUR SERVICES:

- ▷ Availability 24 h / 365 days
- ▷ Remote maintenance
- ▷ Spare parts management
- ▷ Inspections
- ▷ Repairs
- ▷ Maintenance
- ▷ Service packages

... independent of the original equipment manufacturer!

OUR SERVICES

AVAILABILITY 24 H / 365 DAYS

High customer satisfaction is one of the most important goals at Geppert. Therefore our service team is available for you around the clock in order to carry out any troubleshooting as quickly as possible.

Our experienced team of mechanical and electrical engineers will be ready quickly to carry out any repairs and keep unplanned plant downtimes as short as possible.

REMOTE MAINTENANCE

Geppert plants are equipped with state-of-the-art electronic monitoring systems. By using visualisation software and remote maintenance, diagnoses and, if necessary, troubleshooting can be carried out quickly and cost-effectively from a distance.

SPARE PARTS MANAGEMENT

In the course of various service activities, an individually adapted spare parts recommendation can be prepared. Fast delivery of these spare parts is therefore essential.

In coordination with the power plant operator, we offer the supply of various consumables, such as grease, oil, nitrogen, seals, etc. as well as sensors, bearings and various turbine parts, such as spare runners.

old, worn out runner

new, optimized runner

INSPECTION

Inspections enable us to determine the current condition of the electro-mechanical equipment and to adapt various service activities, such as maintenance or repairs, individually to the system and thus prepare and schedule them in the best possible way. This reduces unplanned downtimes to a minimum and any service activities can be carried out quickly, efficiently and cost-effectively.

MAINTENANCE

Regular maintenance, such as oil changes, filter changes or condition and function checks of the plant components, ensure efficiency and operational reliability - and thus ensure the yield security of the hydropower plant.

REPAIRS

Through repair measures, we eliminate various faults that lead to unplanned shutdowns of the hydropower plant and bring it back into a fault-free operating condition. This means that interruptions in operation can be eliminated and the power generation of the plant can continue.

SERVICE PACKAGES

As part of our service activities we offer three different service packages. Thereby you benefit from inspection, maintenance and spare parts management at a fixed rate. Geppert experts inspect and maintain your power plant, thus ensuring long-term operational reliability and the highest possible annual production of the plant. With constant annual rates, the included activities of the respective service package are completely covered.

We are here for you!
Our service team will be happy to advise you!
